

MIS | ERP Sistrade[®] Project Management

Sistrade[®] Project Management is a web-based module developed by SISTRADE that allows the company to expand to other business partners. This module ensures the management of different areas of a company, from ordering, article design, monitoring project invoicing, dispatch and activities planning.

MAIN FEATURES

- Possibility of several types of graphics (tree/hub/...)
- Project management in real time:
 - Temporal component
 - Financial component
- Create/modify/delete projects
- Create charts/reports
- Associate/disassociate project resources
- Assign resources to activities
- View tasks by component
- Supplier evaluation
- Quick access to information
- Weekly overview of workload
- Gantt chart for projects
- OPPM (One Page Project Manager)
- Future forecast regarding project status
- Start/stop methodology in activity execution
- Automatic notifications via email
- Control the progress of activities
- Relate external documents to projects
- Comparative maps between planned and actual
- Collect actual values of resources charged to the project (time, cost, etc.)
- See workflow of activities

Sistrade[®] Project Management is able to handle the increasing number of projects of a company, ensuring more rapid and efficient management, at the same time decreasing the workload of human resources responsible for managing all the information inherent in a project.

Using Sistrade[®] PM, the company can monitor all processes of the various ongoing projects, obtaining correct and efficient management, avoiding slippage and ensuring the success of the project as planned.

Sistrade[®] PM is an application that allows storing, process and organizing of information generated in the company.

HUB GRAPHICS

Project management module can be presented through a HUB, using which, the user can select various module options with a simple click.

Module parameterisation:

Possibility to parameterize the module according to the company using maintenance:

- Work Departments
- Types of Project Resources
- Project Modules
- Project Components
- Project Activities
- Project Resources

OPPM (One Page Project Manager)

Project Management on a page (OPPM - One Page Project Manager), a simplified project management tool, where for each selected and previously inserted in the system project, it is possible to have access to:

- Objectives – presentation if the objectives were or not concluded until the present date;
- Deadlines (forecasted start and end) – Start date, end date, duration in days to complete (in this case applies to the activity, component or module);
- Time % - Slippage percentage of completion (in this case applies to the activity, component or module);
- Exec % - Physical percentage of completion;
- Forecasted time – forecasted hours for completion, set in forecast;
- Actual time – hours spent and counted in execution of activity, component or module;
- Available time – hours still available for the completion of the activity, component or module;
- Gantt chart presentation.

COLLECT DATA ABOUT THE PROGRESS OF THE PROJECT

The purpose of this feature is to collect data on the state of completion of operations, to get an overall progress perspective of the project. This task is available only if the project is running. Chosen data indicate the beginning of operation, end, observation, interruption, etc.

COLLECTING REAL COSTS

Using this feature it is possible to determine the real costs of a project. For that, it is necessary to choose the project where the actual cost values to different types of costs per month will be ascribed.

INSERT ACTIVITIES IN THE SYSTEM

The system allows creating and relating activities to a particular resource. Normally this feature is directed at project managers and other managers. The user will always be notified via email when the activity, which the user has to execute, is inserted.

ACCESS TO WORK SCREEN

The work screen of each user has all the activities that the user is responsible for, which are displayed grouped by the project, and an overview of the weekly workload will be also presented.

Here, the user can start/stop an activity using START/STOP method, the time will always be counted and the information about the spent and available time will be provided.

CONTROL OF ACTIVITY STATUS

Sistrade® PM has a set of maintenance features that allow manage activity status. Since an activity can assume a cycle of statuses, the system provides various options for changing the activity status.

CONSULTATION OF ACTIVITY WORKFLOW

For each activity, the project management module, allows knowing the workflow of all the statuses since it has been inserted into the system.

REGISTER OF PROJECT ACTIVITIES

Sistrade® PM provides the users an overview of activities that the user was working on during the week, providing the time spent grouped by day.

CONSULTATION OF CURRENT AND FINISHED ACTIVITIES

This feature was created in order to give the project manager the most important variables involved in a quick and clear operation. By using a set of filters the system allows to visualize the selected activity, only completed or initiated activities are presented. Each activity is accompanied by a set of data (actual length, margin, percentage, status, etc.) that allow the manager to get a quick idea of the work done.

Sistrade® PM ADVANTAGES

- Accessible using any PC, tablet with the Internet access;
- Smooth, graphic and descriptive interfaces;
- Lean software application, less clicks, more time ;
- Allows users to make micromanagement of the scheduling;
- Allows reducing bureaucracy in terms of Project Manager role (Project manager has always the final decision);
- Quick access to useful information;
- Easy understanding of what goes wrong in the projects;
- Provides Gantt charts ;
- Software can be parameterised according to the company's requirements;
- Easy to handle, very intuitive software;
- Software available in various languages (Portuguese, English, French, Spanish, German, Polish, Arabic, Thai, Lithuanian, Russian, Turkish, Persian, Croatian).
